

European Union Network for the Implementation  
and Enforcement of Environmental Law

# STRATEGIES FOR VERIFICATION OF SELF-MONITORING AND REPORTING ON AIR EMISSIONS WORKSHOP

**The “Regional CEMS network” as a monitoring tool:  
the reliability and the representativeness of data**

**ARPA** LOMBARDIA  
Agenzia Regionale per la Protezione dell'Ambiente

**Andrea Pagani  
Emission Unit  
ARPA Lombardia, Milan  
11/10/2021**

# Summary of presentation:

- The “Regional CEMS network”: short introduction and plants managed
- The reliability and the representativeness of data: main aspects
- Actions carried out by ARPA (IT security, signed AEDOS files, specific reference laws, data comparison between Regional CEMS network and Owner’s CEMS, specific alerts)
- Actions carried out by Owners (hardware maintenance, EN 14181)
- Future developments of The “Regional CEMS network”
- ARPA Lombardia website - references

# Regional CEMS network

▶ Which plants have to connect to the Regional CEMS Network?

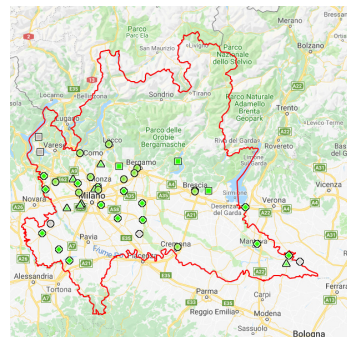

- Solid Municipal Waste Incinerators
- Cements Kilns
- Glass Furnaces
- Large Combustion Plants

▶ How data are acquired?

By specific software called **AEDOS** (Acquirer and Data Processor Open Source) installed on industrial PC.

Every day, emission data recorded by AEDOS are processed by the **software** called **Regional CEMS Network**.

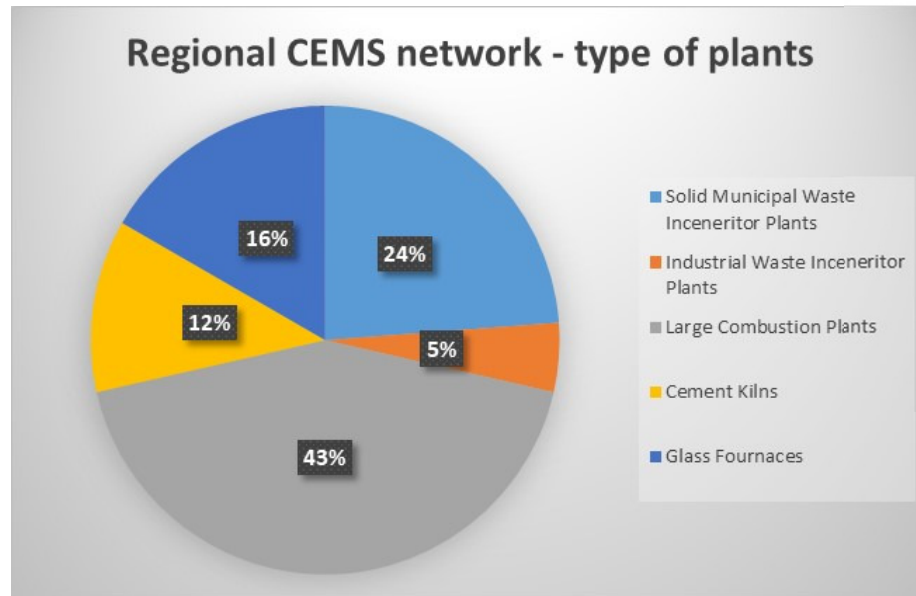

Software to acquire and manage air emission data of stacks of specific plants

# Regional CEMS network - Plants managed

Type of plant	number	CEMS number
Solid Municipal Waste Inceneritor Plants	10	20
Industrial Waste Inceneritor Plants	2	2
Large Combustion Plants	18	41
Cement Kilns	5	6
Glass Fournaces	7	7
<b>Summary</b>	<b>42</b>	<b>76</b>

# Why guarantee the reliability and the representativeness of data?

CEMS data have to photograph the situation of the plant and for this they have to be as precise and reliable as possible.

CEMS data provide informations about:

- ▶ emission trend in relation to the VLE 
- ▶ mass flows 
- ▶ failures to the plant and purification devices 

# How guarantee the reliability and the representativeness of data?

**no static system!** ... but **dynamic system!** →

Data acquisition system requires continuous updating and supervision!

Surveillance and updating actions are carried out by ARPA and by the Owners.

## ARPA actions

Multiple factors:

- 1) IT security (for data download)
- 2) signed AEDOS files (not to allow any data changes)
- 3) Specific reference laws (national laws and regional decrees)
- 4) Data comparison between Regional CEMS network and Owner's CEMS
- 5) Alerts

## 1) IT security (for data download)

To ensure network security, for each Plant, ARPA communicates the range of IP addresses (about ARPA server) to allow the secure sending of data from AEDOS to the CEMS network.

Each Owner must set these addresses to ensure the correct configuration of AEDOS.

## 2) signed AEDOS files (not to allow any changes)

```
-----BEGIN PGP SIGNATURE-----  
  
iQFFBAEBCAAvFiEEewBSB/mwA6RR6vgxLsLYaQlbdXIFAmEqsIARHGhvbGNpbUBh

-----END PGP SIGNATURE-----
```

Each file (istant and average) is signed automatically at the end of the day so as not to allow any changes.

AEDOS - ALICE - vrs. 2.2.3 build: 20201125
Impianto <b>32451</b> - INSTANTANEI

unique code of the CEMS  
(to identify related data)

### 3) Specific reference laws

#### CEMS LEGISLATION

- National law: *D.lgs 152/2006* (Unique Text of Environmental Laws)
- Regional laws: DDS 4343/2010 + DDUO 12834/2011

Laws define homogeneous data processing criteria and code the information in the same way for all plants.

- ✓ Data processing
- ✓ Specific tags to identify:
  - ❑ Polluting parameters, fumes parameters, system parameters, ...
  - ❑ the validity of the data (for ex: VAL define valid data, ERR incorrect data, AUX auxiliary data, ...)
  - ❑ Data source (m - measured, c - calculated, s - estimated)

	CO_V_m_TP	HCl_V_m_TP	NH3_V_m_TP	SO2_V_m_TP	NOx_V_c_TP	
	mg/Nm3	mg/Nm3	mg/Nm3	mg/Nm3	mg/Nm3	
00:00:00	129.241	VAL 1.3919	VAL 7.3977	VAL 19.7353	VAL 249.6041	VAL

## 4) Data comparison between Regional CEMS network and Owner's CEMS

Very important because it allows to have a reference about the *quality* of data!

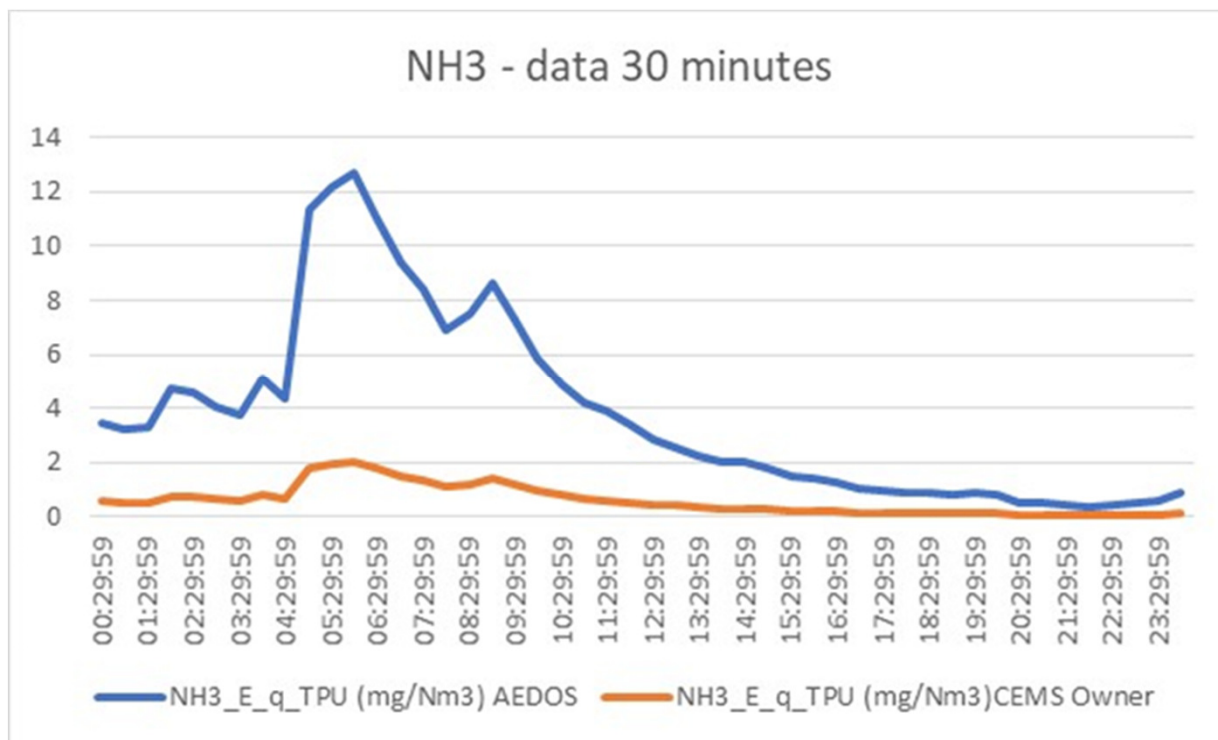

Main deviations found:

- Dry / wet data (ex. O2 wet instead of dry)

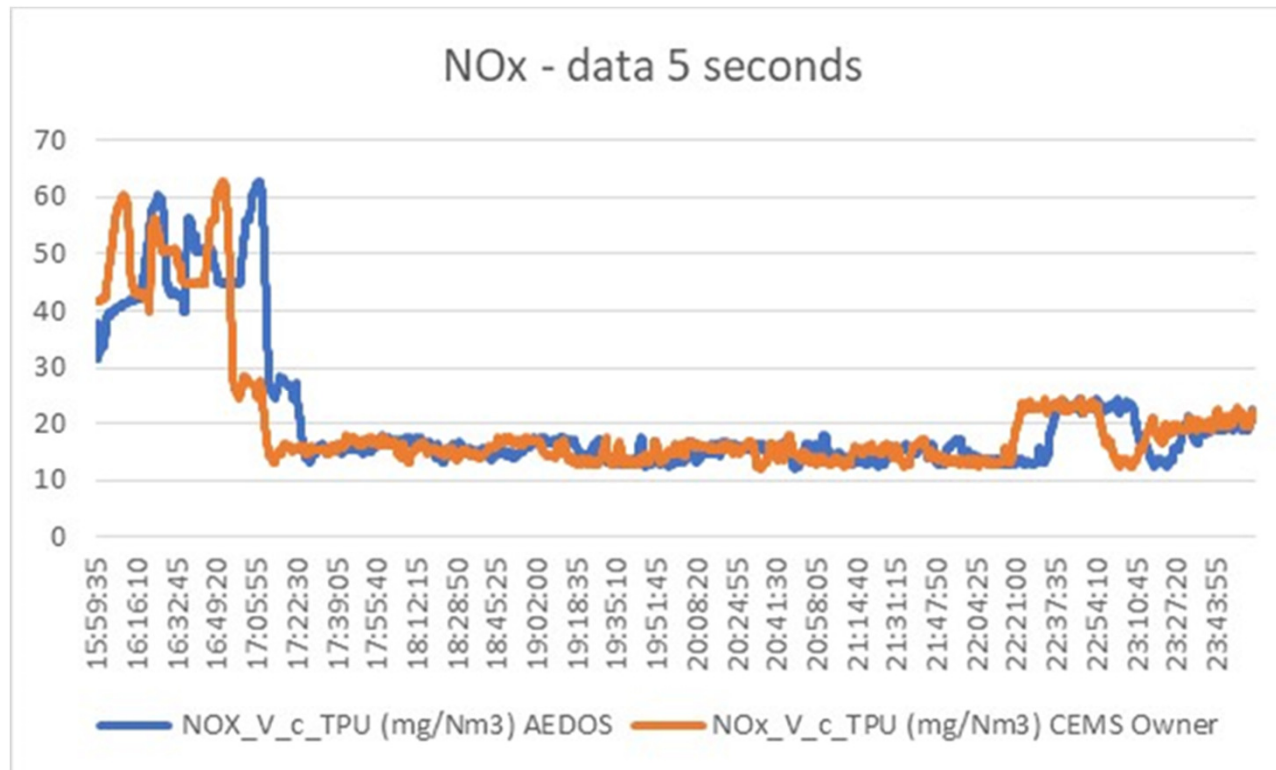

## ... data comparison between Regional CEMS network and Owner's CEMS

- Calibration line (QAL 2) applied not correctly or transcribed incorrectly

## ... data comparison between Regional CEMS network and Owner's CEMS

- Different time reference (cems clock not synchronized)

## 5) Alerts

# Owner actions

- ▶ Follow the indications of ARPA (defined in the AEDOS preliminary installation project)

LEGGI RECEPTELE	INDICAZIONE	ES. n. 102
1. PREMESSA	.....	4
2. RIFERIMENTI NORMATIVI	.....	4
3. SOGGETTI	.....	4
3.1 RIFERENTE LO PROGETTO	.....	4
3.2 SOGGETTI COMPETENTI PER AREA TEMATICA	.....	4
4. DESCRIZIONE IMPIANTO	.....	4
4.1 DATI AMMINISTRATIVI	.....	4
4.2 DATI TECNICI	.....	5

- ▶ Comply with CEMS regulations

## ... Owner actions

- ▶ Hardware maintenance

- ▶ In case of equipment failure, act quickly

- ▶ Continuous Emission Monitoring System compliance check (according to EN 14181)

# ... Owner actions

Communication  
between  
Owners and ARPA  
is very important !!!

**CEMS data require continuous updating and control to be representative and reliable !**

# Future developments of CEMS Network

- ▶ Continuous updating of AEDOS configurations for connected plants
- ▶ Progressive adoption by the plants of the MODBUS protocol to replace the ADAM ASCII
- ▶ Owners portal: now under experimentation, it will allow operators to upload the data of the CEMS plant, send them via FTP, import them into the CEMS network both to fulfill legal obligations and to compare them with AEDOS data
- ▶ Creation of new reports for specific needs

The screenshot shows the ARPA Lombardia website navigation menu. At the top left is the ARPA Lombardia logo with the text "Agenzia Regionale per la Protezione dell'Ambiente". To the right is the Regione Lombardia logo. Below these are navigation links: SCOPRI ARPA, TEMI AMBIENTALI, DATI E INDICATORI, EDUCAZIONE AMBIENTALE, ARPA PER LE IMPRESE, RAPPORTO STATO AMBIENTE, and DOCUMENTI. A breadcrumb trail reads: Home / ARPA Imprese / Autorizzazioni e Controlli / Progetto rete SME. Social media icons for Facebook, Google+, LinkedIn, and Twitter are present. A main menu highlights "ARPA PER LE IMPRESE" with sub-items: ARPA PER LE IMPRESE, AUTORIZZAZIONI E CONTROLLI (highlighted), BONIFICHE, and MATERIALI DA SCAVO. Below this is a secondary menu with items: R.I.R., REACH CLP, RIFIUTI, and SERVIZI E PROCEDURE.

## PROGETTO RETE SME

La finalità del progetto "Rete SME" è la costituzione di una rete dei Sistemi di monitoraggio in continuo installati presso le sorgenti emissive in atmosfera più significative della regione Lombardia (impianti soggetti ad Autorizzazione Integrata Ambientale ai sensi dell'ex D.Lgs. 59/05) per la raccolta e il trattamento centralizzata dei dati forniti da tali sistemi.
